

# A Look at Pheromone Cologne

Imagine a cologne that doesn't just make you smell good, it makes you look good, as well. That is what **pheromone cologne** suppliers would have you believe. A normal product has a selling line like, "Would you like to turn beautiful single ladies on instantly?" Who would say no? Mixed with alluring fragrances, **pheromone colognes** reportedly work on the principal that humans can detect and be influenced by pheromones, but what are they?

Technically, **pheromones** are chemicals produced by animals that affect the behavior of other animals. This isn't a purely sexual affair as many would have you believe. There are pheromones for everything from marking territories in order to in the lead to food. Most of the attention, however, will be on the well documented fact that many insects and animals find and respond to their potential mates based on pheromones.

**Human pheromones** don't really have a strong fragrance. The myth that by applying deodorant, you are covering up your **natural pheromones** won't hold significantly water. Most people would definitely prefer the smell of deodorant more than robust body odor. Technically, pheromones are odorless; they are more or less detected" by an organ in your nose called the **vomeronasal organ**. This organ, though more developed in other mammals, sends signals to the brain when pheromones are detected that may say things like, "Whoa, healthy genes at 8 o'clock, consider his number." At least that maybe what customers of these products hope.
