

Pheromone Chemistry Sets

Making your own **pheromones** is definitely something that should not be taken on by a newbie. However, with a fair amount of research blending together your own pheromones is quite possible. Better yet, there is a significant cost-savings if you are planning on producing pheromones in large quantities.

You decide to purchase your own pheromone chemistry set it will cost you around \$180 and will include Androstadienone, Androstanone, Estratetraenol, Androstenone,, Androstenol, and Estriol.

“ Love-Scent provides a "Pheromone Chemistry Set" in addition to all of the pheromones you might ever need each sold separately. Furthermore they are going to provide pocket atomizers for having and dispensing your own manufactured goods. Cover-Scents can be obtained in a variety of scents like vanilla, sandalwood, lavender, etc. When blending your pheromones it is best to use these inconspicuous cover-scents as the smell of your in a commercial sense engineered perfume or perfume are going to be modified once a pheromone is introduced into the mixture.

Androstenone-is a Steroid that is Found in Both Men and Women Perspire and Urine Glands

There are two different as well as distinct genotypes that could cause **Androstenone** to have a odor. One sort can describe the particular smell as an unpleasant exhausted smell which may be reminescent of urine. However the different kind may describe to be able to be quite pleasurable like a flower. In small amounts, this pheromone is largely undiscovered to be able to humans.

Estratetraenol is really a chemical that is only made by women and there is absolutely no current scientific research which links this particular pheromone back thus to their estrogenic outcomes.

“

Increase Pheromones For Sexual Attraction Pheromones are airborne chemicals which are emitted by humans and animals to attract the opposite sex or even the same sex for that matter if you are a gay or lesbian. It is now known that pheromones are detected through the Vomer nasal Organ (VNO)...

PheromonesAndrostenoneSex PheromoneAndrostadienoneMaking

- **Androsterone** is really a steroid hormone that is made I the liver from the normal metabolic process of testosterone.
- This kind of pheromone was initially isolated in 1931 through Adolf Friedrich Johann Butenandt and Kurt Tscherning through distilling man urine.
- Androstenol is really a **sex pheromone** that is found in **human sweat** glands.
- The actual natural smell is frequently associated with sandalwood as well as Androstenol is found in truffles.
- Pigs are usually attracted to these chemicals and as a result are able to dig them up from their deep underground hideaways.

Estriol is one of the three main estrogens made in the **human body** and is just made in significant amounts when a women is pregnant.
