

Pheromone Cologne - Does it work to seduce Others?

Pheromone cologne is one way that people use to *attract others* through the sense of smell. When we are attracted to other people, we all give off a scent. This really is acquired by others and the chemical substance effect is due to *human pheromones*. This replicates this chemical effect for people and can be used to attract other people to us.

You have probably had a situation where you were attracted to another individual, although you did not know what it was about all of them in which attracted you. Many people have this kind of situation happen to these. They will be at a loss as to why they were attracted to the other person. They might not be very physically appealing or even have a great persona. Oftentimes, it is chemistry at work. In some cases, it may be the *pheromone* perfume actually wearing.

Studies Have Indicated that Pheromone Cologne Does Work to Attract Others

A group study was done which permit half of the people in the study use pheromone cologne while the other half used an ordinary spray. None of the people in the group knew if they were wearing the pheromone cologne or not. Those who had been wearing the pheromone cologne were much more likely to draw in other people than those who work the ordinary spray by 3 in order to 1. It absolutely was clear, from this study, done by the College of West Va on students, that the pheromone perfume was more than just a good scent.

“ When we are thrilled by a thing, or perhaps attracted to an additional person,, we give off a special scent, known as pheromones. This is a chemical reaction to the excitement and is prevalent in all mammals. Other human beings can pick up on this kind of fragrance, although it is very understated as well as they will not know exactly why they are reaction. The bottom line is that human pheromones cause a reaction in others, which is why pheromone perfume is such a great useful way to attract other people.

Most people who are attracted to the pheromone perfume won't know why they are drawn to the individual. We are still not sure why some people seem to hit it off while others do not. This is not always because of *physical attraction* or character - many researchers believe that this is a chemical reaction. We sometimes cite chemistry as a reason as to why we are interested in others. This chemistry is caused by pheromones.
